

→ M3 Debugging SOLUTION

This page provides the solution to the Module 3 Debugging assignment. Please contact your instructor if you have any questions!

Here is how the JavaScript code should look:

```
// Weekly Goal: Calculate the total weekly task goal for a user.

// Declare variables and values
let userName = "Jane Doe";
let dailyGoal = 5;
// FIXED: Changed bonusTasks from string to number for correct arithmetic
operation.
let bonusTasks = 2;

// Output message to console
// FIXED: Added missing parenthesis.
console.log("Checking status for: " + userName);

// Calculate weekly goal based on number of workdays (5) per week
// FIXED: Corrected variable name from 'dialyGoal' to 'dailyGoal' and corrected
multiplier from 15 to 5.
let weeklyGoal = dailyGoal * 5;

// Add bonusTasks to weeklyGoal.
// Note: Check for data type issues
// FIXED: Changed minus to plus.
let totalGoal = weeklyGoal + bonusTasks;

// Output results to web page
document.write("User: " + userName + "<br>");
// FIXED: Corrected quotation marks to not include variable.
document.write("Total Weekly Goal: " + totalGoal);
```

Here is how the working HTML page should look :

Dashboard Status

User: Jane Doe

Total Weekly Goal: 27
